

A REST API for the groupware Kolab with support for different Media Types

Bachelor Thesis

Thomas Koch

April 25, 2012

Kolab

media types

interactions

implementation

problems, findings, future work

Kolab

- ▶ started 2002
- ▶ free MS Exchange replacement for German BSI
- ▶ contacts, calendar, notes, tasks, journals
- ▶ IMAP server as storage and synchronization protocol

Kolab architecture

SMTP

POSTFIX

Web Interface

Apache+PHP mit
Horde/Roundcube

Kolab daemon,
Scripts:
Perl, Python

Verzeichnisdienst

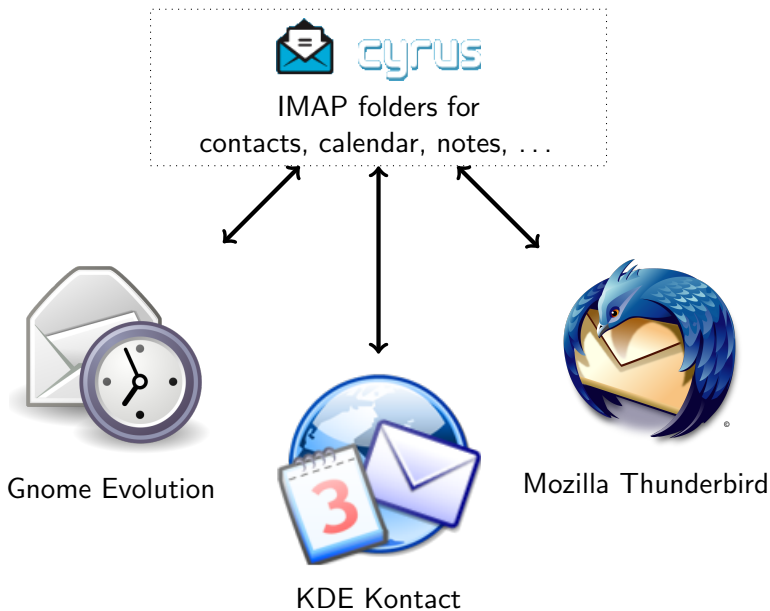

IMAP

cyrus

Clients need Kolab specific connectors

support for different client types

- ▶ desktop apps → vCard (IMF) / xCard (XML)
- ▶ browsers → (X)HTML + semantic annotation
- ▶ js widgets → PortableContacts (JSON)

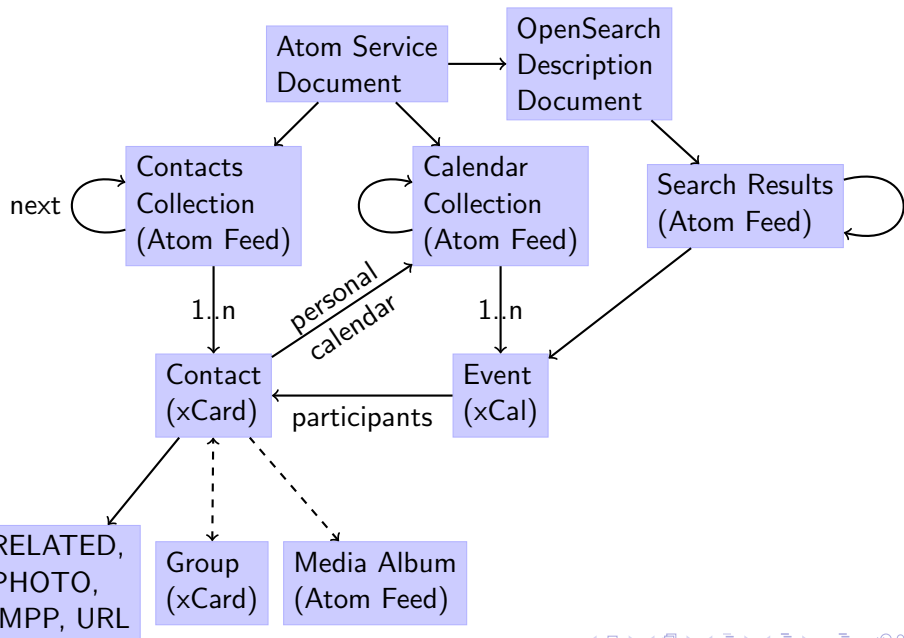

media type conversion and non-isomorphism

approaches:

- ▶ only one media type for writes
- ▶ special PATCH media types
- ▶ restrict types to common denominator
- ▶ extend media types to reach isomorphism
- ▶ ignore the problem, maybe do version control

Atom Publishing Protocol, hypermedia

feed after 11 POSTs

<http://myapi.org/.../contacts?offset=0|4|8>

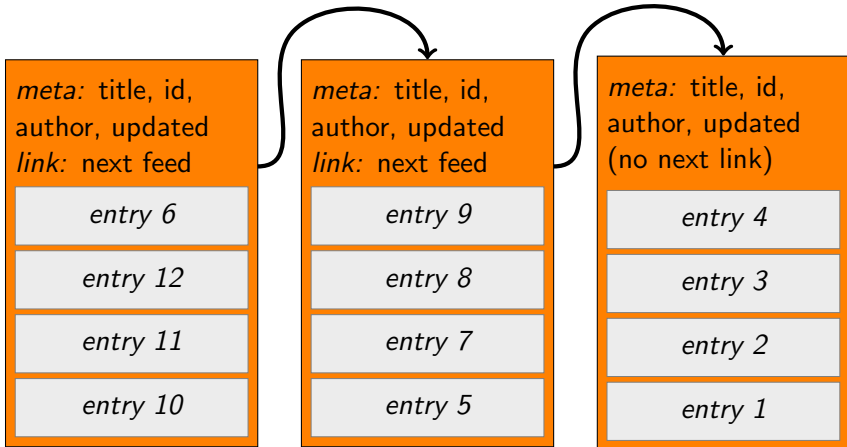

feed entries link to full representations

feed entries sorted by edited time

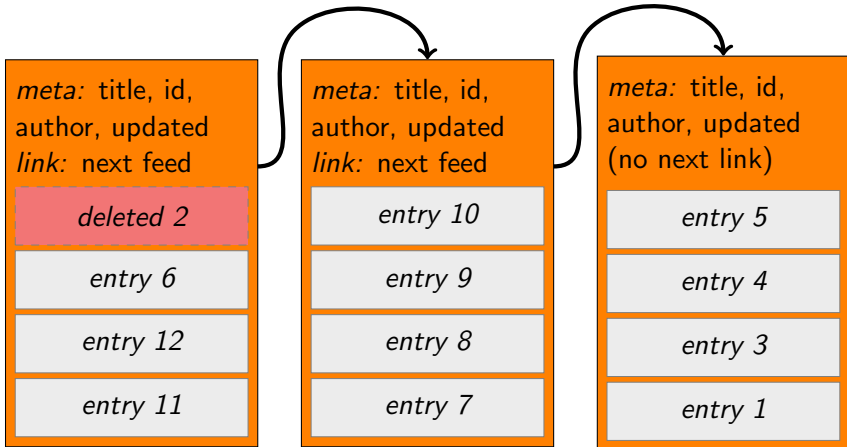

POST new entry to feed

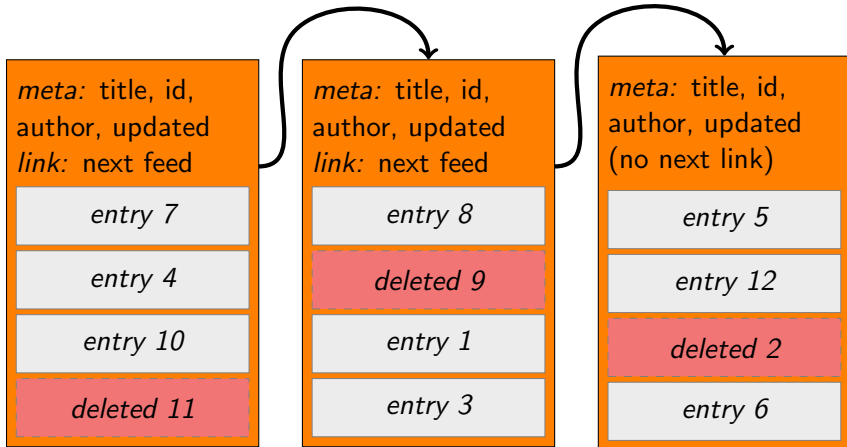

PUT updated entry 6

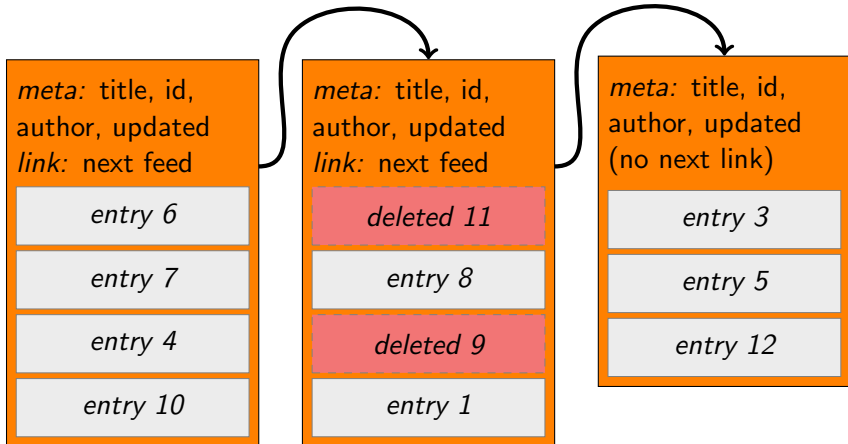

DELETE entry 2

Many more changes

update of entry 6

Execution flow overview

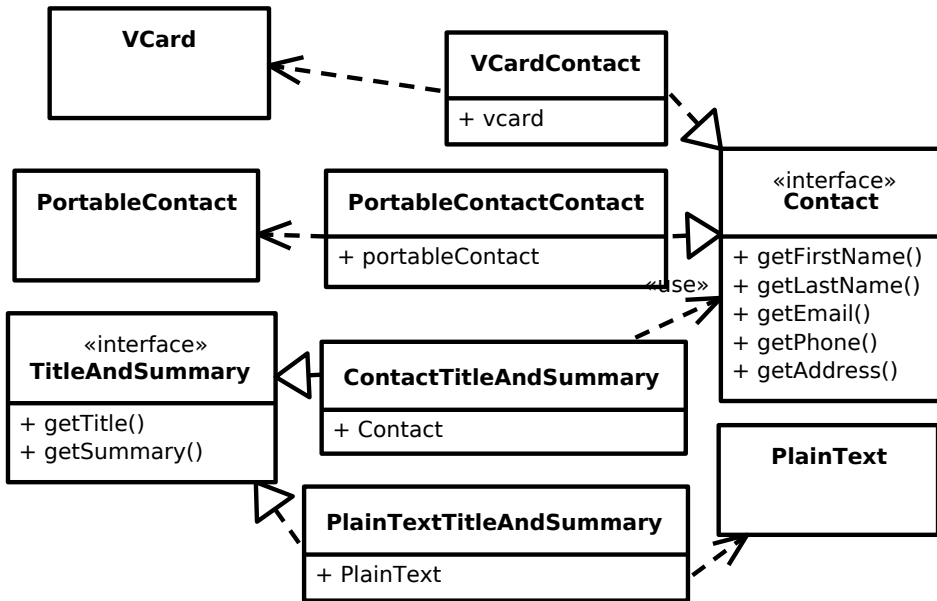

Dashed lines connect the methods whose in- or output is handled by the Providers

Resource Properties

- ▶ essential administration properties: unique ID, last update time, HTTP entity tag
- ▶ generic meta properties: title, summary, author
- ▶ a media type independent interface corresponding to the concept represented by the resource, e.g., a person, location, event, product, ...
- ▶ a media type specific serialization (representation) of the resource

Facades and their dependencies

Facades implementation

Dependency Injection

isolate URI handling

- ▶ processing: `PaginationRange`, `PathParam`, `Router` class
- ▶ construction: `LinkBuilder`
- ▶ URI details are classified information → enforce hypermedia

no `@Path`, `@PathParam`, `@QueryParam` annotations!

problems: media type libraries

- ▶ only vCard 3, no vCard / xCard 4
- ▶ 2 dead PortableContact libraries
- ▶ no existing conversion code
- ▶ no helper for semantic annotation

problems: media type libraries

- ▶ only vCard 3, no vCard / xCard 4
- ▶ 2 dead PortableContact libraries
- ▶ no existing conversion code
- ▶ no helper for semantic annotation

... but dozens of HTTP libraries

Semantic annotation helper

```
div(  itemscope itemType="http://schema.org/Person"
      itemid=#{vcard.getProperty("uid")} )
  span(  itemprop="name" )
    #{vcard.getProperty("fn")}
  span(  itemprop="telephone" )
    #{vcard.getProperty("tel")}
```

let md be a MicroData aware helper object:

```
= md.scope
  div
    = md.prop("name")
      span(  style="color:red" )
    = md.prop("telephone")
    = md.prop("email")
```

Kolab

- ▶ ANNOTATEMORE (draft) → METADATA (RFC 5464) → Special-Use Mailboxes (RFC 6154)
- ▶ vCard 3 → Kolab XML → xCard 4
- ▶ documented by code
- ▶ works only with Cyrus, not with Dovecot

- ▶ concentration on media types
- ▶ JAX-RS not helpful
- ▶ ATOM is versatile
